Mathematics library news 11 April 2014

In 2009, LSU Libraries surveyed faculty journal rankings. There were 22 responses from Mathematics and Experimental Statistics Departments. Among the 296 journals listed in the category, Mathematics, in Journal Citation Reports, LSU faculty rankings included 190 of these. Among the 247 journals listed in the JCR category, Mathematics, Applied, LSU faculty rankings included 79 of these. Among the 117 journals in the JCR category, Statistics & Probability, LSU faculty rankings included 36 of these. (JCR categories overlap.)

Respondents' rankings were put into Mathematics Department departmental aggregate scores by my colleague Steve Bensman. In the Mathematics JCR category, 94 journals were checked for whether LSU Libraries subscribes to these. In the Applied Mathematics category, 22 were checked for subscriptions. In the Statistics & Probability category, 33 were checked. (Ranking scores determined how many were checked.)

Table 1 shows a summary by type of publisher/distributor. Cells show the number of subscriptions among the journals checked for each type of publisher or distributor. Individual journals are listed in Tables 2-4.

Faculty rankings of journals in the JCR category Mathematics had a weak correlation with impact factor ($r=0.25$) or 5-year impact factor ($r=0.32$), and a better correlation ($r=0.47$) with total number of citations received by all issues of each journal in 2012, the most recent year for which this data is available. The impact factor of a journal is the average number of citations received in a citing year for articles published in that journal for the two years (or five years, respectively) prior to the citing year.
