This Thesis is brought to you for free and open access by the Ogden Honors College at LSU Scholarly Repository. It has been accepted for inclusion in Honors Theses by an authorized administrator of LSU Scholarly Repository. For more information, please contact ir@lsu.edu.

Dental Genetic Traits of Selected Maya Burials from
Wild Cane Cay and Moho Cay, Belize

by

Kelly Heim

Undergraduate honors thesis under the direction of

Dr. Heather McKillop

Department of Geography and Anthropology

Submitted to the LSU Honors College in partial fulfillment of
the Upper Division Honors Program.

May, 2011

Louisiana State University
& Agricultural and Mechanical College
Baton Rouge, Louisiana

Acknowledgements

Dr. Heather McKillop: I want to thank Dr. McKillop because not only was she my thesis director, but she was also in charge of the excavations during which the material that I examined was discovered. Without her work before me or her willingness to have me be part of this project, my thesis work would not have been possible. I want to thank her for the huge role she played in allowing me to reach this point.

Zoe Morris and Kellye French: These two individuals worked with the material from Wild Cane Cay and Moho Cay before I did, and as such, I was given access to unpublished descriptive statistics for many of the burials that I studied. Without their work before me, I would not have been privy to much of the information that helped me throughout my research.

Dr. David Chicoine: I want to thank him for understanding my interests in the field of anthropology and for pointing me in the right direction to study something I truly love with my thesis. Dr. Chicoine also provided me with invaluable work experience by trusting me to be part of the excavation of human material during his field school. Finally, he was also a member of the committee responsible for helping me to edit and revise my thesis, and for the work that required, I would like to say thanks.

Dr. Maribel Dietz: I want to thank her for agreeing to be a member of my thesis committee and helping me to edit and revise my thesis. I also want to thank her for allowing me to pursue my own interests and study something I was passionate about in her class, even though it probably wasn't the most applicable topic. Thanks for encouraging my interest in bog bodies!

Ms. Mary Manhein: I would like to thank Ms. Manhein for placing me in her forensic anthropology class, helping me to affirm my career interests. She is also responsible for providing me with my base knowledge of teeth, without which this thesis would have been significantly more difficult.

Louisiana State University's Honors College: I would like to thank the Honors College for admitting me and in turn granting me the opportunity to conduct research of this magnitude as an undergraduate student.

My Family and Friends: Without the wonderful people in my life constantly providing me with support and encouragement, I might have gone nuts during this process. Thank you all for believing in me and knowing the things that I was capable of, especially on those days when I was unsure of it.
